

# Data Intelligence exam 2023

Exam date: 2023-05-30 to 2023-05-31

## Questions

Analyze one of the provided datasets and submit your findings in a report.

1. Describe the data and your process in written words
2. Pose one or more questions to answer using the data
3. Analyze and visualize the data using Python code. Explain the individual parts of your program.
4. Discuss and contextualize your findings

The report should be submitted in jupyter notebook format (.ipynb) containing both textual parts and code parts. The python code should be executable as submitted with the exception that you don't need to take special measures to handle paths into the filesystem.
